

VistaClear Window Screen

The new VistaClear allergen resistant window screen from Alpen High Performance Products can provide enhanced protection against the pollen, dust particles and other airborne allergens that are often the cause of seasonal allergies and asthma.

Functioning much like an electrostatic air filter, this nearly-transparent allergen “barrier” can actually *repel dust and pollen before it ever enters your home.*

So, don't let problems with allergies or indoor air quality slow you down any longer!

Benefits:

- Exceptional pollen and dust filtering
- Unparalleled visibility and transparency
- Proprietary PVC- and Phthalate-free construction
- Enhanced through-screen airflow
- Superior strength and durability

CONTROLS DUST AND POLLEN

If you are one of the estimated 26 million Americans who suffer from hay fever or seasonal allergies, keeping allergens out of your home could make a huge difference in your quality of life.

Delivering exceptional airflow and providing protection against a wide range of airborne particulates* are the hallmarks of Alpen's cutting-edge, electrostatically charged window screens.

When you want *absolute control* over your indoor air quality, choose Allergen Resistant Screens.

*Measured in comparison to an open window according to ISO 12103-1 A1, using grass pollen and dust particles.

NEARLY TRANSPARENT

Due to the ultra-fine construction of individual screen fibers and high "thread density", VistaClear screens provide a nearly invisible boundary to protect your home. At 36x32 threads per square inch, this is one of the finest and most transparent screens in the industry.

DURABLE

These resilient high-tech screens are constructed of a unique PVC- and phthalate-free composite fiber, creating one of the toughest and most tear-resistant window screens currently available. Due to their extraordinary tensile strength, these proprietary world-class screens are capable of withstanding more forceful impacts or accidental snags than any comparable screen on the market.
