About Zenith Series Finishes

Alpen's sturdy fiberglass frames are made with thermoset resins that do not soften or melt when heated. This means Alpen sliding glass doors can be painted with dark colors like black and dark brown, and used in even hot, sunny, high altitude climates without warping or sagging.

Alpen sliding glass doors are available in virtually unlimited color options, ranging from 14 standard colors to any custom color or split finish/two tone styles. Custom color matching and "two-tone" or "split-finish" upgrade options are also available.

All colors on this chart are representative of Alpen paint and hardware finishes. Contact Alpen for physical samples.
