

Due to extended lead times and supply disruptions, Alpen has opted make a supplier change for the applied grid material used in the fabrication of our **Simulated Divided Lite (SDL) glass configurations**.

The new grids are manufactured from a strong, durable composite material, and will be **painted in house to match** our existing colors as closely as possible.

The **new grids will be utilized on all existing and future orders unless otherwise requested** by the customer, Rep, or Dealer. If the old grid material is required, the order will be subject to the lead time by the manufacturer at the time of order.

Please reach out to your Alpen Representative with any questions, many thanks!
